

LexisNexis® IP DataDirect

The world's leading full-text patent collection

IP DataDirect (IPDD) is LexisNexis's bulk delivery platform that offers access to the most comprehensive patent data: 130+ million documents from 100+ authorities, 69 in full text, in one single format.

Fast and reliable updates

New & updated publications nearly real-time

Largest English full-text collection

Integrate with the LexisNexis Search or leverage your own algorithms

Flexible and tailored

Customize the data feed per authority, date range or classifications

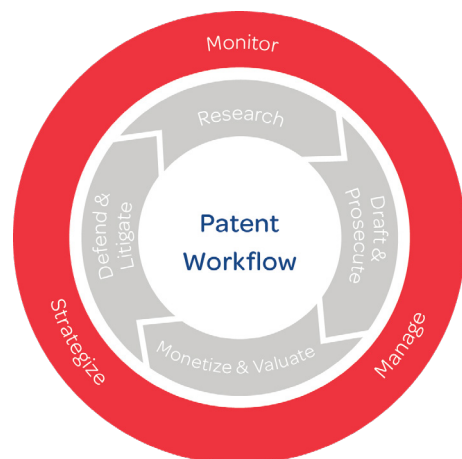

IP DataDirect removes the complexity of gathering different data sets and formats from various sources and harmonizes the data within one single database, per publication.

IP DataDirect contains the latest patent data available from 100+ patent offices, enriched with value added elements such as Machine Translation, Legal Data, normalised names and family data by our dedicated team of experts.

The cornerstone for patent-focused, reliable analytics and in-house search-driven solutions.

LexisNexis® industry-leading collection of patent content can be used to fill your in-house patent data system or meet your bulk patent data needs.

Every single publication is delivered in standardized XMLs, based on the WIPO ST.36 standard.

Do you have specific requirements for getting patent information? LexisNexis customises your patent information exactly to your needs. All technical requirements of the major in-house IP management and analytic tools can be met. The extensive know-how of the LexisNexis team guarantees sound advice on creating an efficient and secure data stream.

| *A world of patent data
at your fingertips.*

IP DataDirect features at a glance

IP DataDirect 'Classic' - Batch API	IP DataDirect Search API	IP DataDirect Custom Services
Online delivery platform to supply complete or partial patent information	Direct search in the full collection and seamless integration with your inhouse data system	Customizable on-demand delivery of patent data sets, tailored to your data needs
